

# 8th CIRP IPSS CONFERENCE

## Product-Service Systems across Life Cycle

# 2016

## 20-21 June, Bergamo (Italy)

***Dr. Mohamed-Zied Ouertani*** (ABB Corporate Research, Germany)

### **Internet of Things, Services and People – Challenges and solutions for the digital transformation**

A new era of industrial innovation is ahead of us. Referred to as the fourth industrial revolution or the Industrie 4.0, the deeper meshing of the digital world with the world of machines holds the potential to bring about profound transformation to global industry. All these opportunities created by the Internet of Things and the Industrie 4.0 come of course with many challenges. This makes the new industrial stage, where the Internet meets production, a major topic of discussion at academic and industrial conferences and events.

This talk will shed some light on the latest advances on how ABB is dealing with these challenges. The IoTSP (Internet of Things, Services and People) is our initiative to collaborate in the Industrie 4.0 ecosystem to resolve some of the upcoming challenges.
